Information and measures related to the Corona virus

Instructions for entering the Logistics area of SW

Entry into the Logistics area is **not permitted** for the driver if:

- The driver's body temperature is > 37.5 Celsius
- The driver is coming from one of the risk areas defined by the Robert Koch Institute
- The driver has had contact with an infected person

Observe the following hygiene requirements when entering the Logistics area:

- No shaking hands
- Safety distance of 1.5 meters from other persons
- Driver reports to the contact person in the Logistics area
- Driver waits either in the vehicle or at an appropriate distance until unloading/loading is complete
- Wash hands thoroughly
- Cough or sneeze into the crook of the arm

We are currently not making use of face masks or disposable shoes because their deterrent effect is minimal according to the information available to us and they interfere too much with work processes.

Please help so that we can all remain healthy and counteract infection.

We will need understanding and consideration on both sides, from the drivers and SW Logistics employees, to be able to confront the spread of the virus together in an appropriate way.

pp Thomas Bäuerle
Logistics Manager
